But these characteristics are not wanting in the genus Bacteriastrum, hence the new series of forms, which unquestionably have certain affinities to Chsetoceros, must be regarded as forming a transition to the tubulate Rhizosolcnise. The name that has been proposed for the genus has reference to the broom-like appearance of the frustules, and the following generic definition may be given: --Frustula cylindrica, libera (); valvis convexis, setarum radiantium corona cinctis. According to the character of the connecting zone and awns this genus may be divided into two sections, embracing--A. Forms with simple smooth connecting zones and smooth awns. B. Forms with complex annulate connecting zones and echinated awns. Section A. Connecting zones simple and smooth; awns smooth. Corethron criophilum, n. sp. (Plate XXI. fig. 14.)
