What You Will Learn \* Debug your Puppet infrastructure \* Use APIs to ensure services are working properly \* Fix catalog compilation issues \* Solve problems using Hiera tool \* Detect problems in your environment using PuppetDB tool \* Learn ways to format code to aid in identifying errors \* Troubleshoot errors in modules and templates In Detail Puppet is a configuration management system written for system administrators to manage a large number of systems efficiently and help maintain order. Deploying Puppet becomes more complex as you increase the number of nodes in your environment. The Puppet tool is an intelligent solution that increases the automation footprint for the proactive management of server infrastructures. Puppet's simple programming language is usable on most operating systems and is portable on different deployment environments. We begin by looking at the puppet.conf server configuration file, and talk about possible problems that can occur. What does puppet really do in the background and what options does it provide for troubleshooting? This is what we will explore. Moving on, we will be troubleshooting errors made in modules and templates, finding the best solutions. We will be writing code that will help us in identify...
